

Perfect Placement With Templates

Templates are great for many things, specially helping you line up your designs when it's time to embroider them on your project. Here is the way that I use them!

1. Fold your template in half on the printed line.
2. Hold your folded template where you would like your embroidery to go on your project/fabric.
3. Chalk off a line along the edge of your fold and out from the horizontal line. Remove your template, and extend that line. Hoop your project.

4. Now you have your mark to line up your machine. Simply move your design (on your machine) so your needle is right above your mark. Now you know your design will have perfect placement!

This way is very helpful when deciding where to place a design on a garment because you can use the template as a visual.
